

Jira, your GetFeedback resolution center

Integrate GetFeedback and Jira

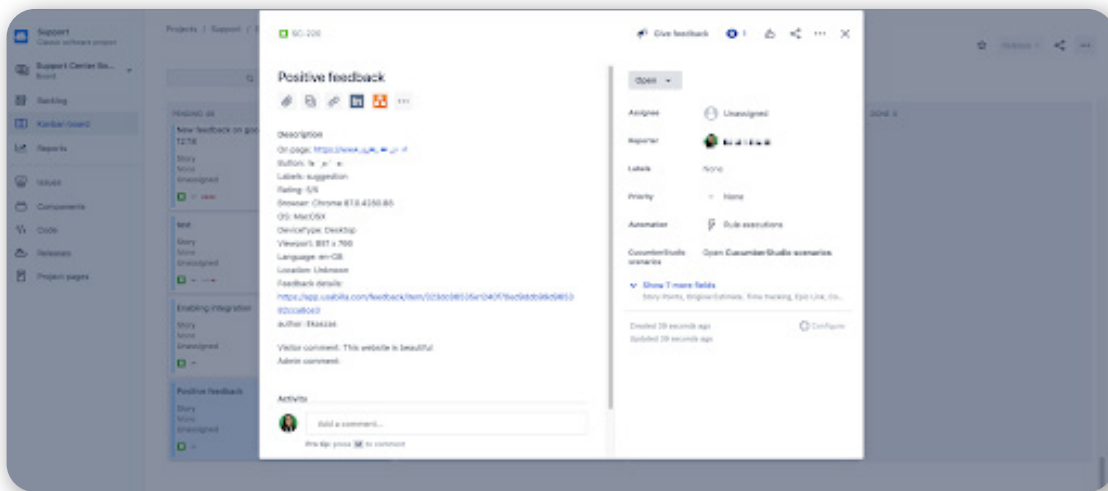

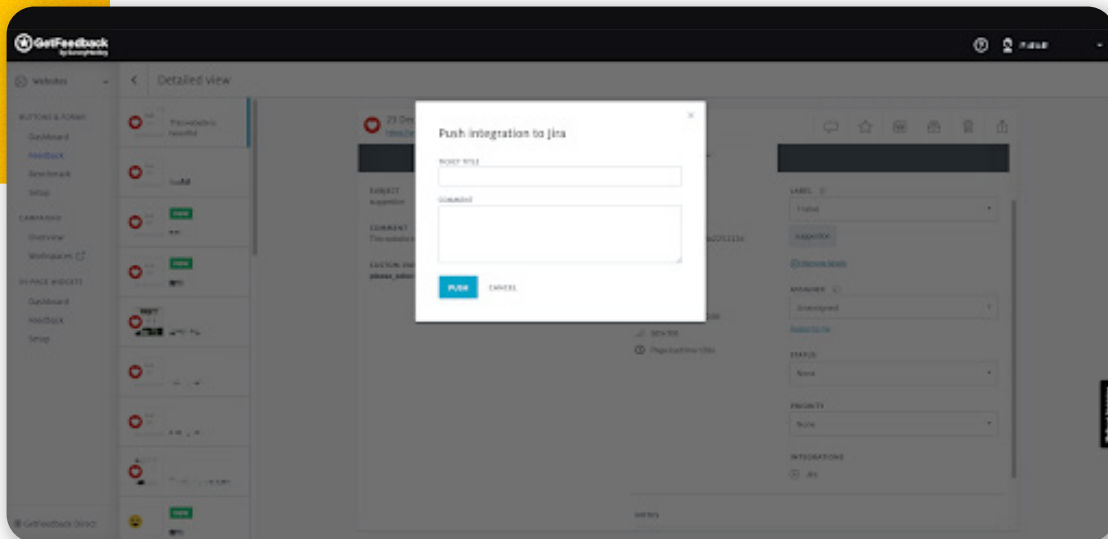

To quickly route bugs and feature requests from customers straight to the teams ready to resolve them.

Push responses from GetFeedback to Jira for resolution.

If you're prepared to take quick action when a customer reports an issue or asks for a new product feature, customer feedback can shape your product for the better. Integrate GetFeedback and Jira to route feedback and help your product team populate its kanban with customer requests, prioritize issues based on mentions, and ultimately build amazing things.

You can choose to route all GetFeedback responses to Jira, route some responses based on set conditions, or manually select which responses to route. This makes it easy to capture and act on product feedback across all your surveys, not just your product feedback surveys.

Here's how customer success and IT teams can use this integration to handle issues faster:

Customer success

Route issues and product suggestions straight to a Jira project

IT

See the results of product feedback surveys directly in Jira
